

ABSTRACT

This invention relates to methods, pharmaceutical compositions and kits useful in treating female sexual dysfunction and the use of an estrogen agonist / antagonist for the manufacture of a medicament for the treatment of female sexual dysfunction. The compositions are comprised of an estrogen agonist / antagonist as a first active ingredient and a cyclic guanosine 3',5'-monophosphate elevator as a second active component and a pharmaceutically acceptable vehicle, carrier or diluent. The compositions and methods of treatment are effective while substantially reducing the concomitant liability of adverse effects associated with estrogen administration.
